

QIANG XU

Seeking an AI Product Management Internship

Beijing | +86 15838695058 | 3420260662@bit.edu.cn
Portfolio: <https://steve-ron.github.io/ai-product-ops-portfolio/>
Available 5 weekdays per week for 6+ months | Weekend classes

PROFILE

Master's student in Digital Economy at Beijing Institute of Technology, focused on LLM applications, evaluation design and product feedback analysis. Built two independent interactive prototypes and supporting PRDs, using AI assistance for front-end implementation and data processing.

EDUCATION

Beijing Institute of Technology Master's in Digital Economy	Sep 2026 - Jun 2028
Currently enrolled, part-time AI and Economic Decision-Making track Weekend classes	
Chengdu College of Arts and Sciences	Sep 2021 - Jun 2025
Bachelor's in Calligraphy	

INTERNSHIP EXPERIENCE

星智云科 AI Product Operations Intern	May 2026 - Aug 2026
Zhongguancun, Haidian, Beijing Internal knowledge base Q&A assistant	
Feedback operations: Organized trial feedback for a knowledge base Q&A assistant, recorded issue descriptions, reproduction conditions and status, and maintained a categorized feedback log for product review.	
Content maintenance: Helped update knowledge base and FAQ content, organized common questions and answer guidance, checked wording, and added entries based on issues found during trials.	
Testing and follow-up: Tested AI responses and basic functionality using predefined cases. Recorded inputs, outputs and reproduction steps, maintained an issue list, tracked fixes and assisted with retesting.	
Operations support: Helped organize basic operational data, weekly reports and requirements documents; summarized feedback categories and issue progress, and maintained test records and progress documentation.	

INDEPENDENT PRODUCT PROJECTS

LLM Lens LLM Evaluation & Bad Case Workbench	Aug 2026
Independent project Product design and evaluation planning AI-assisted implementation	
Problem definition: Defined workflows for AI product and evaluation roles addressing subjective model comparisons and hard-to-reproduce failures. Produced a PRD, interactive prototype and acceptance criteria.	
Evaluation design: Designed 48 test cases across 8 dimensions, including instruction following, multi-turn context and factual freshness. Specified acceptance criteria and fields for model versions, raw outputs, scores and review status. Execution is pending.	
Prototype delivery: Curated 120 public Chinese and English LMArena preference comparisons with full responses and source references. Built filtering, response comparison, run-record entry and JSON / CSV export with AI assistance.	
Product decisions: Separated human preference labels, rule-based cause suggestions and manual conclusions. Designed the case selection, output recording, scoring, review and export workflow to support future baseline evaluation.	
Signal Desk AI Product Feedback Workbench	Aug 2026
Independent project Requirements analysis and feedback triage AI-assisted implementation	
Problem definition: Designed a traceable feedback ledger to turn scattered public issues into a review queue. Produced a PRD covering categorization, candidate ranking and source verification.	
Data preparation: Collected 156 public Open WebUI issues through the GitHub API, excluding pull requests, usernames and issue bodies. Used titles and labels to define 9 themes and 3 feedback types; retained source links.	
Analysis and proposals: Rule-based triage identified 45 model / API connection issues, 22 interface / conversation-flow issues and 21 knowledge-base / RAG issues. Proposed connection checks, RAG pipeline visibility and audits of uncategorized issues for future validation.	
Prototype delivery: Designed a transparent triage score using comments, reactions, status and blocker signals. Delivered combined filters, candidate ranking, source links and CSV export to support manual review.	

SKILLS & LANGUAGES

Product: Requirements analysis, PRDs, user flows, prototypes, acceptance criteria, evaluation design and feedback triage.
AI and data: LLM capabilities and limitations, prompting, agent / RAG fundamentals; Excel pivot tables and common functions; basic Python / SQL; GitHub API, JSON and CSV.
English: CET-4: 516; CET-6: 475. Comfortable reading English technical documentation and public data descriptions.
